

HIGH POWER NPN POWER DARLINGTON TRANSISTORS

**D66DV5,6,7
D66EV5,6,7**

**500-700 VOLTS
50 AMP, 125 WATTS**

The General Electric D66DV and EV are high current power Darlington transistors. They feature collector isolation from the heat sink, and internal construction designed for stress-free operation at temperature extremes and quick connect electrical terminals. They are designed to meet UL creep, strike and isolation voltage. Major applications are for motor controls, switching power supplies, and UPS systems.

Features:

- High Voltage: 400-500 $V_{CEO(SUS)}$; 500-700 V_{CEV}
- High Current: 75 Amperes, I_C (Peak)
- High Gain: h_{FE} 50 Minimum @ 50 Amperes, I_C ($h_{FE} = 135$, typical)
